

Learn HTML & CSS

A 14-Day / 28-Hour Job-Ready Curriculum

Two hours a day for two weeks. Full depth on the 'why' behind every layout decision, hands-on browser-based exercises every day, a Week 1 portfolio project, and a Week 2 multi-page responsive capstone. Companion files live in `D:/Git/learning-code/html-css/`

Week	Focus	Days
Week 1	HTML structure, CSS fundamentals, Flexbox, Grid	Days 0-7
Week 2	Responsive design, polish, accessibility, architecture, deployment	Days 8-14

How To Use This Track

Each day lives in its own folder: dayNN-topic/. Every folder has a lesson.md (read first), a starter.html (and starter.css on CSS-focused days) with TODO markers you fill in yourself, a solution.html/solution.css reference, and a CHECKLIST.md for manual, visual verification -- HTML/CSS can't be auto-graded with a PASS/FAIL script the way code can, so verification means opening the file in a browser and comparing against the checklist.

Week 1 -- Foundations

Day 0: Primer

What HTML/CSS are, how browsers render them, DevTools basics.

Day 1: HTML Basics

Document structure, headings, paragraphs, links, images, lists, attributes.

Day 2: Forms, Tables, Semantic HTML5

Form inputs, labels, tables, header/nav/main/article/footer.

Day 3: CSS Basics

Selectors, the cascade, specificity, the box model, box-sizing.

Day 4: CSS Layout Fundamentals

display, position, positioning contexts, margin collapsing.

Day 5: Flexbox

Main/cross axis, justify-content, align-items, flex-grow/shrink/basis.

Day 6: CSS Grid

grid-template-columns/rows, fr unit, grid-template-areas, Grid vs Flexbox.

Day 7: Mini Project

A personal portfolio/landing page combining all of Week 1.

Week 2 -- Job-Ready Polish

Day 8: Responsive Design

Media queries, mobile-first, viewport meta tag, em/rem/vw/vh.

Day 9: CSS Advanced

Pseudo-classes/elements, transitions, keyframe animations, custom properties.

Day 10: Typography, Color, Accessibility

Font stacks, line-height, color formats, contrast ratios.

Day 11: CSS Architecture

BEM naming, organizing stylesheets, resets/normalize.

Day 12: Forms & Debugging

HTML5 validation, :valid/:invalid styling, systematic DevTools debugging.

Day 13: Practical

Multi-page project structure, git workflow, deploying to GitHub Pages.

Day 14: Capstone

A complete multi-page responsive website, built mostly unassisted.

Full lessons, starter/solution files, and checklists for every day are in D:/Git/learning-code/html-css/. Start with day00-primer/lesson.md.
